#### Notes

1. Granite and marble are natural stone materials containing veins with tonality differences. There will be colour and markings caused by their complex mineral composition and incorporated impurities. While such materials can be pre-selected before installation, this non-conformity in the marble or granite cannot be totally avoided. Granite tiles are pre-polished before laying and care has been taken for their installation. However, granite being a much harder material than marble cannot be re-polished after installation. Hence, some differences may be felt at the joints.
2. Timber strips are natural material containing veins and tonal differences. Thus it is not possible to achieve total consistency of colour and grain in their selection and installation.
